

NITRO V2PX

JUST ADD COLD BREW

SERVING NITRO COFFEE HAS NEVER BEEN SO EASY!

Nitro brew coffee has never been easier with the Nitro V2PX series from Brood. This system draws cold brew coffee from any container, keg, or bag-in-a-box, chills it and infuses the coffee with nitrogen. This nitrogen has been extracted from the air, meaning that no nitrogen tanks are required.

Unlike traditional Nitro Kegerators, the Nitro V2PX is compact, portable, and easy to transport. As it does not rely on a supply on nitrogen via a tank, the V2PX produces unlimited nitro coffee for as long as you need it (or until your coffee supply is depleted), without the hassle of replacing tanks or monitoring pressure regulators.

With the Nitro V2PX series systems, you can pour a drink of nitro coffee in less than 7 seconds with complete consistency and with the creamy, smooth mouthfeel that you love from nitro-infused beverages. Expand your coffee menu with the V2PX machine and experience the on-demand, low-wastage convenience of nitro coffee.

Also available in a double tap configuration, your customers can enjoy both nitro and flat cold brew beverages from the one machine.

Available in Black Stainless Finish.

Features:

- Consistency with every pour
- Cools down to 2 degrees Celsius
- Works with any beverage
- Low maintenance
- Plug & Play: setup the system in 2 minutes and you're ready to serve
- Adjustable temperature
- Adjustable nitrogen levels

Specifications:

- Power: 230V/50Hz; 1.8A
- Dimensions: 290mm x 345mm x 530mm
- Dispensing Capacity: 36 L/Hour
- Internal Tubing Capacity: 750ml
- Coffee Temperature at Tap: 2C (+/-1C)
- Pressure at Tap: 34 psi
- Weight: 24kg (Single), 33kg (Double)
- NSF and ETL Certified
- Warranty: 12 Months
- Filters air to 1 Micron
