

## The OCD: ONA Coffee Distributor

The even distribution of coffee grounds in your portafilter basket is one of the important steps in making a delicious espresso. If your coffee is uneven in the basket, the water will pass through the coffee bed at different rates, resulting in an uneven, inconsistent extraction. To eliminate this inconsistency, World Barista Champion Sasa Sestic and his team at ONA Coffee designed the ONA Coffee Distributor - also known as the OCD, to evenly distribute coffee grounds in your basket before tamping. Simply place the OCD on top of your coffee-filled basket, spin a few times to distribute and create a flat coffee bed, and tamp as normal.

**OCD2.0**  
OCD V2 - ONA Coffee Distributor

### Features:

- Four angled slopes to efficiently create an even puck
- Brass material to eliminate static
- No need to collapse the dose
- Minimises chaneling in the extraction
- Easily adjustable depth for a range of doses
- Diameter: 58.5mm (fits both IMS and VST baskets)
- Weight: 490g
- Materials: Brass, Anodized Aluminium
